RED LIGHT THERAPY FOR VETERINARY

7 DIFFERENT COLORS

ADJUSTABLE HEAD FOR LARGE COVERAGE OR FOCUSED INTENSITY.

Red light therapy (RLT) for animals has been gaining popularity due to its potential health benefits. This non-invasive treatment uses low-level red and near-infrared light to stimulate healing at the cellular level. Here are some of the key benefits for animals:

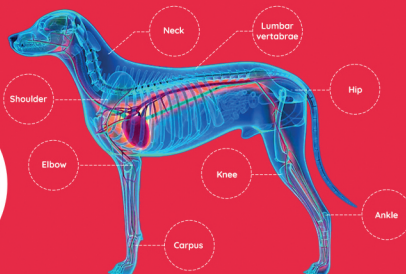

1. Pain relief: RLT can help reduce pain by promoting blood circulation and reducing inflammation. It's especially useful for animals suffering from arthritis, joint pain, or post-surgery recovery.
2. Faster wound healing: The therapy accelerates the healing of cuts, wounds, and injuries by stimulating cell regeneration and increasing collagen production.
3. Reduced inflammation: RLT can decrease inflammation in tissues, making it effective for conditions like tendonitis, muscle strains, and other inflammatory conditions.
4. Improved mobility: For older animals or those with musculoskeletal problems, RLT can enhance mobility by reducing stiffness and improving joint function.
5. Skin health: It promotes healthier skin by aiding in the healing of skin irritations, hot spots, and even conditions like eczema or dermatitis.
6. Stress reduction: Some evidence suggests that RLT may also help with calming stressed or anxious animals by reducing overall body discomfort.
7. Enhanced circulation: By improving blood flow, RLT supports better oxygen and nutrient delivery to tissues, promoting overall vitality and healing.

In veterinary use, it's applied to dogs, cats, horses, and other animals, offering a natural and side-effect-free complement to conventional treatments.

SPECIFICATION

Diode Quantity	1500 / 3000
Power	400W / 800W
Diode Power	100mw/diode
Wavelength	400-700nm
LED Colors	Red Blue Yellow Orange Cyan Purple White
Screen	8inch touch screen
Working Mode	Pulse mode/ Continue Mode

USE WHEREVER YOUR DOG FEELS PAIN

Did you know?

Apart from the pain benefits light therapy also stimulates serotonin which may help anxious or nervous pets.
